

Cross-Industry Standard to Apply Across All Dashboards

The goal is to make every module feel part of one enterprise dashboard system while still reflecting the needs of each function.

Layer	Purpose	Standard content	Design note
Filter bar	Scope control	Date range, owner, team, status, site/client/department	Place at top of every dashboard
KPI cards	Fast performance read	4–6 metrics with target, variance, and trend direction	Keep wording short and scannable
Charts and trends	Movement and distribution	Line, bar, funnel, aging, workload, status mix	Prioritize comparability over decoration
Operational details	Daily execution support	Tables for active records and personal work items	Allow drill-down to record lists
Action-needed panel	Decision support	Overdue items, SLA risk, blockers, expiring items, critical alerts	This is what turns reporting into action

Elements to Add Across All Modules

- Targets and variance on KPI cards
- Comparison period such as versus last week, month, or quarter
- Consistent naming for statuses, dates, and owners
- At least one trend chart per dashboard
- One action-needed panel per dashboard
- Clear drill-down path from cards and charts to detail lists

Naming and Charting Rules

- Use title case consistently and avoid mixed labels such as “To start” and “To Start”.
- Use full words instead of shorthand labels when space allows.
- Prefer line and bar charts for trends and comparisons.
- Use pie charts only for simple part-to-whole views with few categories.

Marketing

Purpose: Best for campaign execution, deadlines, and team bandwidth visibility.

Dashboard section	Proposed content
Row 1 – KPI cards	Total Campaigns Active Campaigns Tasks Due Today Overdue Tasks Leads Generated Spend vs Budget
Row 2 – Charts and trends	Campaign status by stage Tasks by status Campaign launches by week Channel performance by spend and leads Team workload by member
